SNAHASHIS PAUL

Graduate DevOps Engineer | AWS · Kubernetes · Terraform · CI/CD

07459 179466 • S.PAUL3-2024@hull.ac.uk • Hull, UK (open to relocation)

Summary

Recent MSc Advanced Computer Science graduate (University of Hull) looking for a graduate-level DevOps role. Brings hands-on industry experience moving a startup platform to Amazon EKS with Terraform, delivering it through Helm and Argo CD, automating CI/CD and running logging pipelines.

Education

University of Hull — Hull, UK

MSc Advanced Computer Science (BCS-accredited)

- Relevant modules: Trustworthy Computing, Dependable Reactive Real-time Systems, Commercial Development Practice.
- Dissertation: lightweight semantic segmentation for kerb detection.

Shahjalal University of Science and Technology — Sylhet, Bangladesh

BSc Computer Science and Engineering

Skills

AWS (EKS, ECR, IAM) · Terraform · Kubernetes · Helm · Argo CD · Istio · Docker · CI/CD · GitHub Actions · Python · Django · Kafka · Elasticsearch / ELK · Git

Experience

OTORide (micromobility startup) — Dubai, UAE

Backend, IoT & Infrastructure Engineer

- Migrated services from traditional servers to Docker, then to Amazon EKS defined in Terraform, with Istio routing HTTPS and vehicle TCP traffic and nodes added on demand, which lowered monthly AWS costs.
- Set up GitOps delivery: a monorepo release pipeline with custom version bumping publishes Helm charts to Amazon ECR, and Argo CD syncs them to the cluster with automatic pruning and self-healing.
- Configured External Secrets Operator with IAM roles for service accounts, so the cluster obtains short-lived ECR credentials instead of storing long-lived keys.
- Fixed recurring Elasticsearch failures (JVM heap exhaustion, circuit-breaker trips and full disks causing incomplete API responses) through heap tuning, scheduled log clean-up jobs in CI/CD and Docker monitoring.
- Created logging pipelines with Kafka, Logstash and the ELK stack.

Freelance Junior Consultant — Remote

DevOps client projects

- Created GitHub Actions workflows replacing legacy Jenkins, uBuild and uDeploy processes, as part of a project moving more than 500 applications from SVN to GitHub.

BD Task — Dhaka, Bangladesh

Senior iOS Developer

- Built a health-tech iOS app with in-app audio and video calls.

Parking Koi — Dhaka, Bangladesh

Co-founder, Lead Mobile Developer

- Released Android and iOS parking apps, including a QR-code parking feature.
